Ulbora CMS Add-ons

Intro:

Ulbora CMS Add-ons are simple REST web services. Any existing REST web service meeting the Ulbora CMS Add-on specification can be registered and used from within Ulbora CMS. Access to Add-ons is provided by a single Ulbora CMS pass-through web service. Details about the specification and how to access Add-ons follows.

Specification:

Ulbora CMS Add-ons must meet the following specs:

- 1. Must be a REST service
- 2. Must use JSON as data-interchange format
- 3. Secure services must use basic authentication
- 4. Must implement CORS
- 5. Must return in 2 seconds or less for optimal performance.

As you can see, many existing web services already meet the Ulbora CMS Add-ons specification and can be registered and used from within Ulbora CMS with no issues.

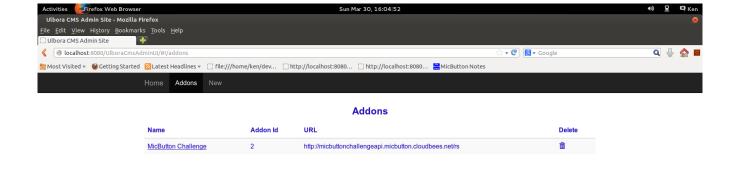

In figure 1 below, isonRequest is passed as a UTF-8 encoded byte array.

Request:

Figure 1 "add0nId":230, "addOnName": "Payment Service", "method": "POST", "serviceName": "payment", "methodName": null. "jsonRequest": "PGRpdiBzdHlsZT0icGFnZS1icmVhay1iZWZvcmU6YWx3YXlzOyBwYWdlLWJyZWFrLWFmdGVyO mFsd2F5cyI+PGRpdj48cD48Yj5UaGlzIGlzIHRoZSBUaXRsZQombHQ7L2ImZ3Q7PC9wPgo8cD5UaGlzIGlzIGEgdGVz dCBwYXJhZ3JhcGguCjwvcD4KPGltZyBzcmM9Imh0dHA6Ly9sb2NhbGhvc3Q60DA4MC9VbGJvcmFDTVNBUEkvcnMvaW1 hZ2UvZ2V0LzEyIiAgc3R5bGU9ImZsb2F00iBsZWZ00yIgIGFsdD0iaW1hZ2UiIC8+CjxwPlRoaXMgaXMgYW5vdGhlci BwYXJhZ3JhcGguCjwvcD4KPHA+e3RhYmxlTGVmdFN0YXJ0fQpbe1Rlc3QgMX0ge1Rlc3QgdmFsfV0KW3tUZXN0IDJ9I HtUZXNOIDIgdmFsfV0KPC9wPgo8cD57dGFibGVMZWZ0RW5kfQo8L3A+CjxwPnt0YWJsZUNlbnRlclN0YXJ0fQpbe1Rl c3QgMX0ge1Rlc3QgdmFsfV0KW3tUZXN0IDJ9IHtUZXN0IDIgdmFsfV08L3A+Cgo8L2Rpdj48L2Rpdj4KPGRpdiBzdHl sZTŌicGFnZS1icmVhay1iZWZvcmU6YWx3YXlzOyBwYWdlLWJyZWFrLWFmdGVyOmFsd2F5cyI+PGRpdj48cD57dGFibG VDZW50ZXJFbmR9CjwvcD4KPHRhYmxlIGFsaWduPSdyaWdodCcgc3R5bGU9J2JvcmRlcjogYmxhY2sgc29saWQgMXB40 yAgd2lkdGg6IDEwMCU7Jz48dHI+PHRkPlRlc3QgMTwvdGQ+PHRkPlRlc3QgdmFsPC90ZD48L3RyPjx0cj48dGQ+VGVz dCAyPC90ZD48dGQ+VGVzdCAyIHZhbDwvdGQ+PC90cj48L3RhYmx1PgoKPC9kaXY+PC9kaXY+Cg==

Figure 2 shows a call to invoke an Add-on service that uses a GET. The Add-on is first registered with Ulbora CMS. The attribute "jsonResponse" in the response is also a **UTF-8 encoded byte array.** The call is as follows:

Copyright 2014 UlboraCMS | Powered by UlboraCMS

```
Figure 2 (request)

{
    "addOnId":2,
    "addOnName":"MicButton Challenge",
    "method":"GET",
    "serviceName":"challenge",
    "methodName":null,
    "queryParameters": {
        "languageCode":"en_US"
    }
}
```

```
Figure 3 (response)

{
    "success":true,
    "message":"Service Call Sucessful",
    "jsonResponse":"eyJxdWVzdGlvbiI6IldoaWNoIGlzIHdoaXRlLCBhIGR1Y2sgb3IgYSBibGFjayBjb3c/Iiw
ia2V5IjoiNzY2YjA3ZjAwMmFhODgwZjc3N2U5M2VjOWQyMjhhMDdlYWMxMzdhYyJ9"
}
```

The Attribute "jsonResponse" above translates to:

```
{
    "question":"Which is white, a duck or a black cow?",
    "key":"766b07f002aa880f777e93ec9d228a07eac137ac"
}
```

Sequence Diagram:

The sequence diagram below shows how an inventory Add-on could be used with a payment Add-on.

First, a call is made to the inventory Add-on to check the inventory for an item. Then a call is made to the payment Add-on to process a payment for that item. Once the payment is processed successfully, another call is made to the inventory Add-on to update payment information and inventory information.

The Ulbora CMS *Add-on module service* is merely a pass-through service call to the two registered Add-ons.

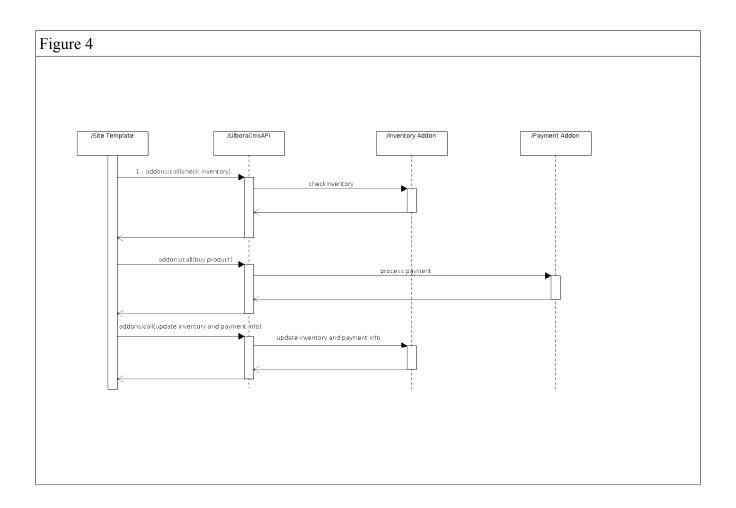

Figure 5 shows the complete Ulbora Add-on service request:

```
Figure 5 (Complete Request)

{
    "addOnId":230,
    "addOnName":"Addon Name",
    "method":"POST or PUT or DELETE or GET",
    "serviceName":"serviceName",
    "methodName":"methodName of null",
    "jsonRequest":"UTF-8 encoded byte array",
    "queryParameters":{
        "param1name":"param1value",
        "param2name":"param2value"
},
    "pathParameters":[
        "param1value",
        "param2value"
]
}
```
